ADvantage 8.4.1.0 Release Summary

1   Summary of Previous Updates

This full base-line release includes all revisions made to ADvantage from the 8.4.0 version. This includes 360+ enhancements and fixes made since April 2013, and provided in updates 8.4.0.0 – 8.4.0.12. Also included are changes made since the 8.4.0.12 update as summarized below.

Release summaries for updates 8.3.2f and later are available from the ADI web site:

   http://www.adi.com/products/software-releases/

The following summaries changes made since 8.4.0.12 only.

2   Minor Fixes / Enhancements

This update includes only a few minor enhancements:
* Several additions to ADvantageDE python scripting support.
* Multiple changes and improvements to documentation.
* ADvantageFC is no longer included in the Version 8 distribution – it must be installed using the SAS install package.
* The maximum number of schedules in ADvantageVI has been increased from 8192 to 10200.
* The ADvantageVI status bar information is now displayed in a color-coded "dashboard" at the top of the application.
* Several fixes have been made to improve the robustness of distributed simulations.

3   Major Enhancements

There are no major enhancements included in this update.

Devices / Drivers

No additional logical device support is included in this release. Some enhancements and fixes were made to some Ballard devices.

Please refer to the release notes for detailed information.
