

# ADvantage 8.4.0.7 Update Summary

---

## 1 Minor Fixes / Enhancements

This update includes ~25 minor enhancements and fixes, including:

- Enhancement to ADvantageDE to allow for runtime target re-assignment without rebuilding project – supported for rtX targets only, and requires matching configurations on targets being switched.
- ADvantageVI now supports changing of variable display format in Data Browser, Data Logging, and Override views with multiple variables selected.
- Several documentation improvements.
- RTS Ethernet distributed logical device enhanced to support is\_frame\_clock.

## 2 Major Enhancements

This update includes no major enhancements.

### Devices / Drivers

This update adds support for the following new logical devices:

- New MIL/Aero 1394 Firewire driver/device with ADvantageDB support.

Please refer to the release notes for detailed information.
