

ADvantageSAS 1.0.2.0 Service Pack Summary

This service pack is the first since the initial version was released. Although no major new features have been added since the previous 1.0.1 update, numerous minor fixes and enhancements have been included.

1 Minor Fixes / Enhancements

This update includes 40+ bug fixes and minor enhancements. The majority of these are related to:

- Occasional crash when multiple datasets are coming from ADvantageVI.
- Printing issues related to margins and printing notebooks.
- Improved CPU usage for dynamic charts.
- Chart axis scale issues
- Name change of Raw Data view to Tabular Data view.
- New options for value formatting in Tabular View and Chart Readouts / Cursors.
- Improved error handling of MAT files.
- Several fixes and changes to script functions.
- Python module name changed back to simplot from adv.
- Issues related to Merging datasets and Loading Filtered datasets.
- Several Linux specific issues were identified and fixed.
- Two new complex plotting examples have been added.

Please refer to the release notes for detailed information.
