ADEPT 10.1.6 Update Summary

1 Minor Fixes / Enhancements

This update includes ~130 minor enhancements and fixes:

- Improvements to support non-dictionary model variables and 64bit data types in schedules, overrides, DAS, and triggers.
- Options to include additional C files when generating model dictionary for ADSIM and Simulink models.
- Option added to allow auto-close of auto-started ADEPT-GD when ADEPT-VI project is closed.
- Ability via popup menus in ADEPT-VI to save specific schedule, DAS, trigger, and override information to either setup or script files.
- Option added to allow clearing of server working directory on project close.
- Several issues related to launching GDB on Linux clients have been resolved.
- Functionality improvements to ADEPT Panel Selection List and Value Input components.
- Fixed some memory / resource usage issues for long running simulations.
- Fixed issues related to font size differences between Linux and Windows clients for ADEPT Panels.
- Several diagnostic and cybersecurity improvements to rtxd.
- Added verbose diagnostic output for ADEPT-DE when loading device template and server config files.
- Added support for hyphen's in server names
- Numerous other server and client side minor fixes and enhancements.

2 Major Enhancements

- Simulink R2022A Support
