Multi-protocol Communications Database

# *Scripting & Interfacing with ADvantage DB*

## *Thursday, January 19th 2:00 - 3:00 EST*

ADvantageDB is a tool used to manage large network definitions of complex systems such as aircraft, satellites, and shipboard systems. In this online training course ADvantageDB's powerful Python scripting capabilities will be demonstrated using both native and external Python libraries. Attendees will see how ADvantageDB databases can interface with external toolsets to increase productivity - importing and populating databases from ICDs, exporting bus specifications for use with external tools, and automating document generation.
