Increasing Efficiency of Data Acquisition ***Thursday, March 2nd*** ***2:00 - 3:00 EST***

As real-time simulation systems continue to grow in size and scope, so too have the demands for large scale real-time data acquisition. In this online training course we will discuss the methods users can apply to their ADvantage Framework projects to optimize their data collection while minimizing unnecessary loads. Join ADI to learn how you can modify your data acquisition with trigger, skew, and dynamic updates to meet real-time simulation requirements.
