Integrated Debugging in ADvantage

***Thursday, July 20th
2:00 - 2:30 EDT***

The ADvantage Framework includes multiple debuggers that allow users to investigate issues in their real-time models and test execution scripts. In this online training course we will discuss how to use the GNU Debugger (GDB) and integrated Python debugger within ADvantage. We will step through example C and Python code to demonstrate how bugs can be quickly found and resolved while using the ADvantage Framework.
