Applied Dynamics International Announces Free Instructional Webinars

Ann Arbor, MI ... Applied Dynamics International (ADI, Ann Arbor, MI) announces their Early 2016 Webinar Series of free training for everyone with an interest in simulation, product validation, and testing.

Every two weeks, now through April 2016, a new webinar will be presented in a series of instructional classes. The series will start with an overview of how hardware and software are used in the development and testing of complex control systems, progressing through choosing platforms and tools, on to validation and life-cycle management.

ADI's free web-based seminars will feature how to use a software platform for model based systems engineering, manage, plot, and work with data. Demonstrations will show methods for using COTS hardware and software to manage applications that range from building systems integration test benches all the way up to designing distributed multi-core high-level architectures.

The free Early 2016 Webinar Series will demonstrate proven methodologies to manage the most complex applications in use with industry leaders such as Gulfstream, Boeing, Rolls-Royce, BAE Systems, NASA, Honeywell, General Dynamics and many more.

Please visit www.adi.com for the webinar schedule and registration information.

About Applied Dynamics, Applied Dynamics helps companies make better use of model based systems engineering (MBSE) assets and methodologies through all stages of product development, verification testing, demonstration, training, and maintenance. Applied Dynamics helps design, manufacture, integrate and commission many of the world's most advanced test facilities used to develop complex systems. Applied Dynamics flagship product, the ADvantage Framework, is an MBSE software platform providing an agile, feature-rich environment for supporting product lifecycle through development, integration, verification, certification, and maintenance. ADvantage embraces an open architecture and allows its users to leverage best-in-class COTS and open source technologies. The ADvantage user base includes more than 50% of the Fortune 500 aerospace and defense companies and extends into marine, power systems, oil & gas, and the automotive industry.
